

Marketing_Overview

Marketing Overview

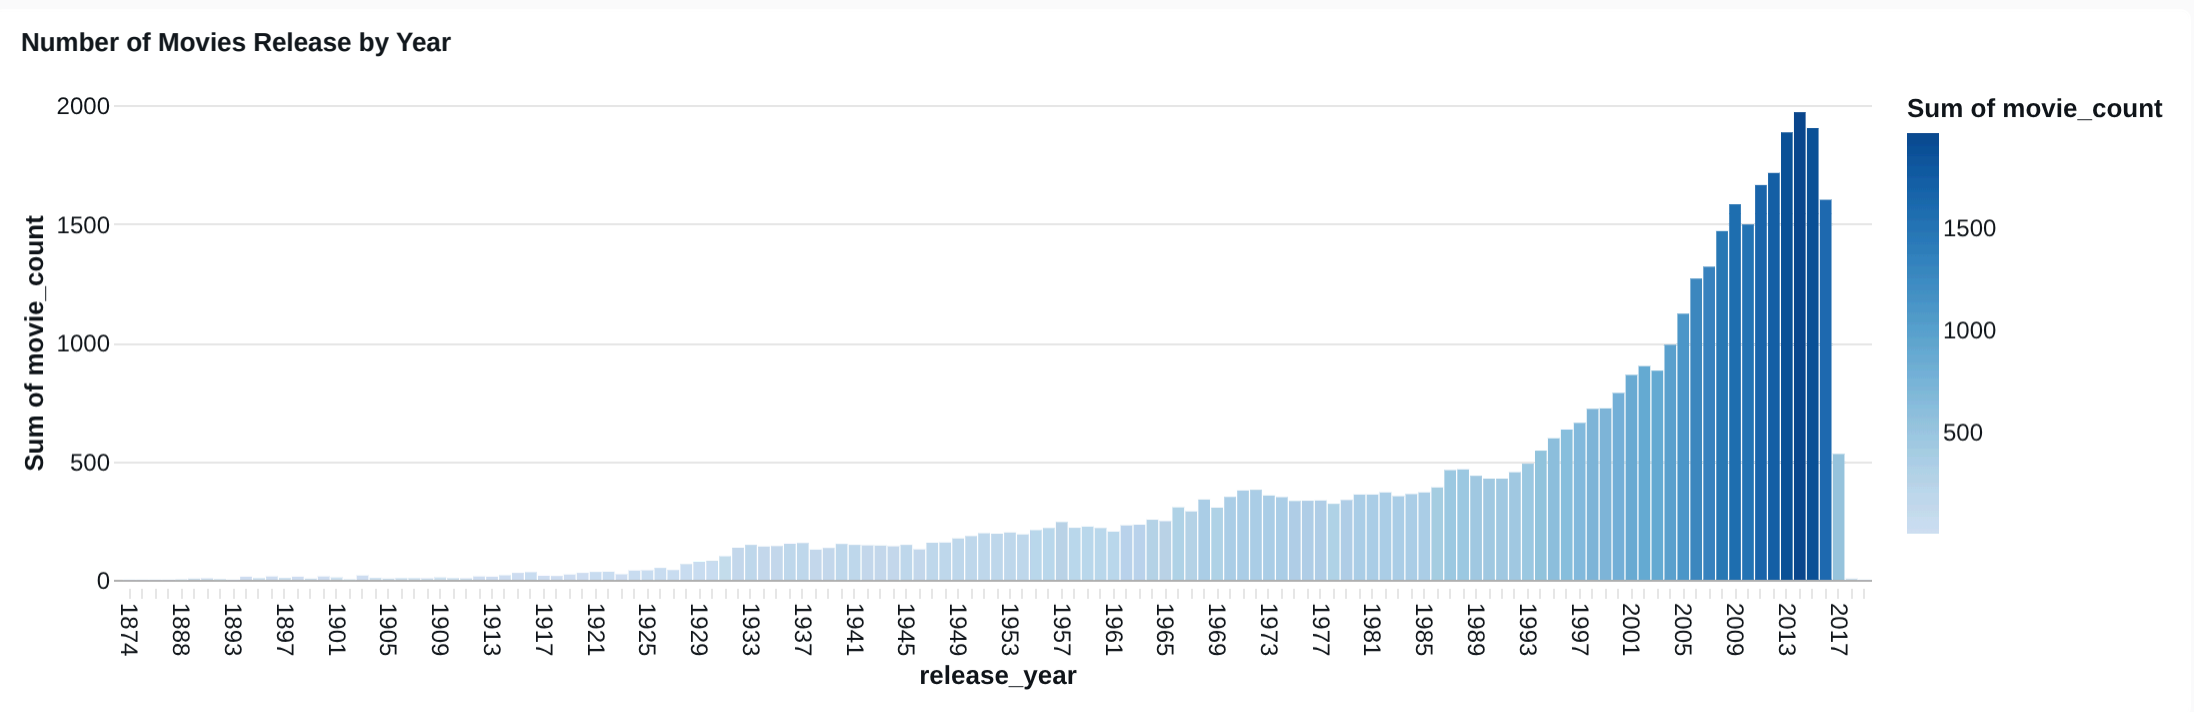

This dashboard provides a high-level overview of the movie market's scale and financial performance over time. It examines the number of movies released each year, changes in average production budget and revenue, and the estimated total profit generate by the industry,

The three charts below show:

The number of moviews released by year

The average budget and revenue by year

The total estimated profit by year

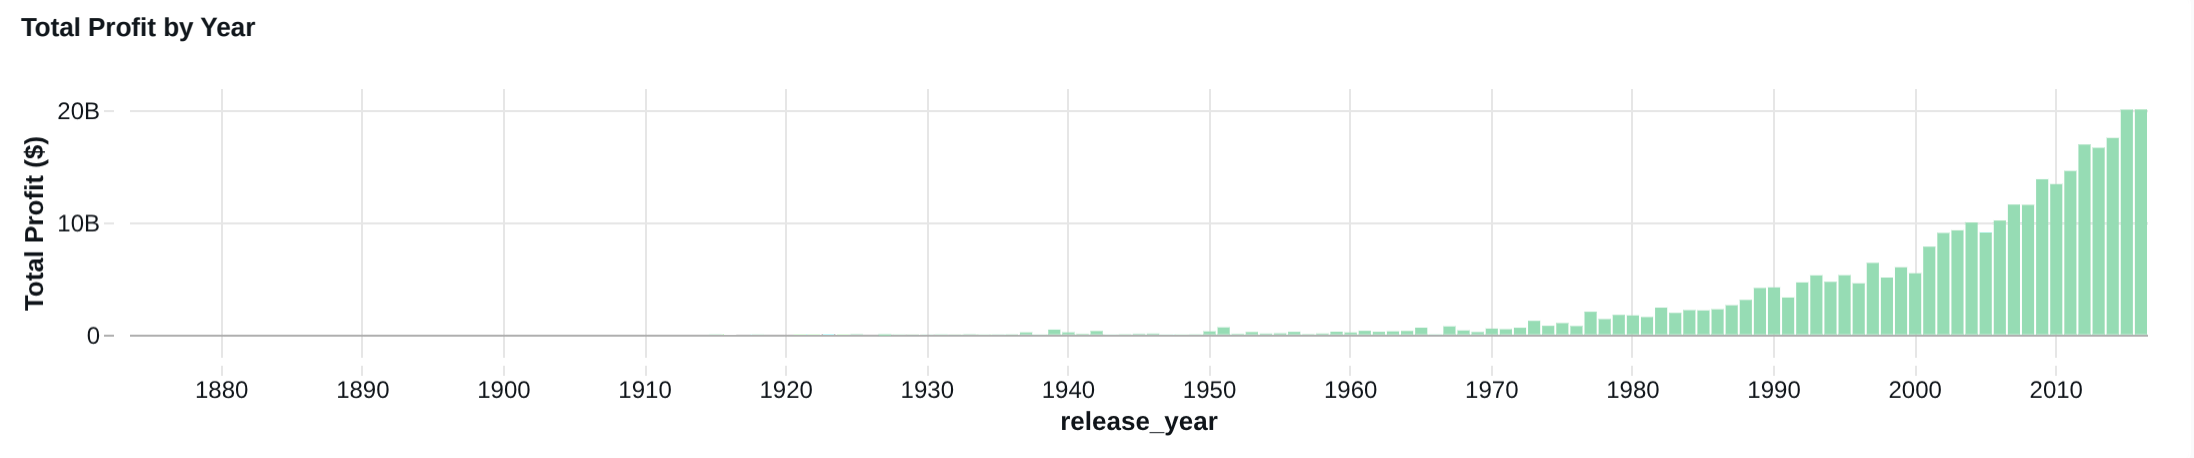

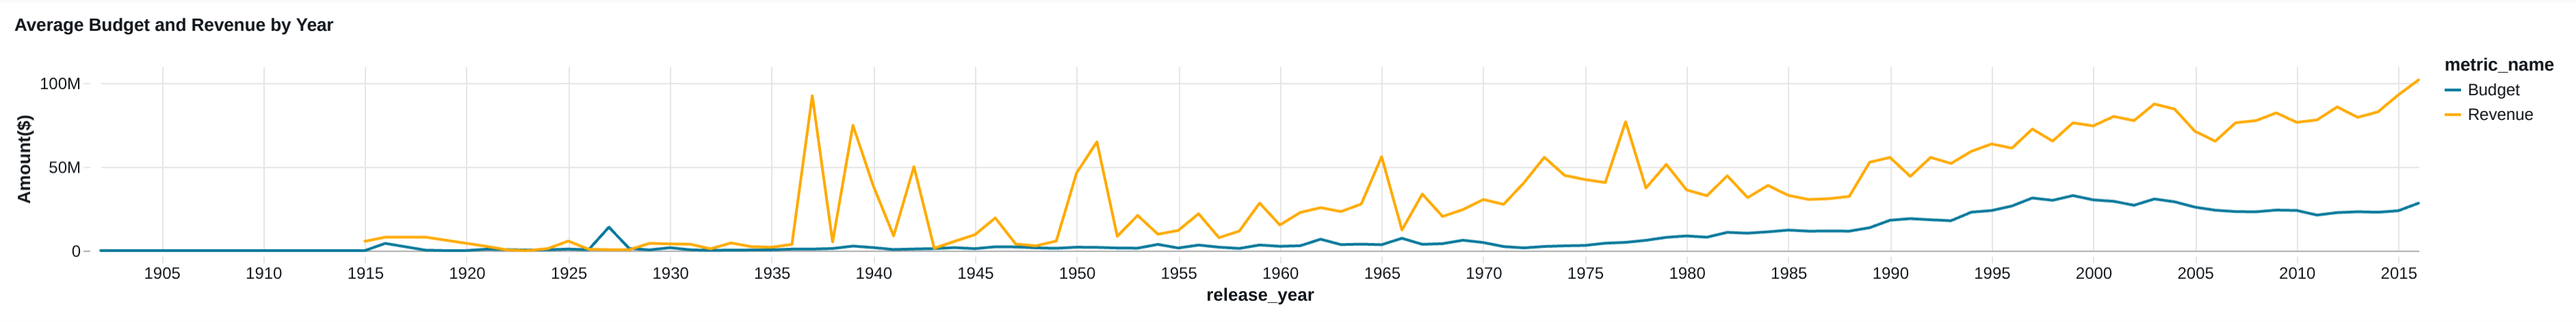

Number of Movies Release by Year

- As an initial investigation, we examine the number of movies released each year.
- The bar shows a general uptrend in the number of movie records from 1883 to around 2014. There is an apparent decline can be observed afater 2014, followed by a sharp drop after 2017.
- However, this decline should not be interpreted as an actual decrease in global movie production.The source dataset on release on or before July 2017, meaning that the data for 2017 is incomplete and later years are not reliably convered.
- Therefore, we'll exclude in complete years from the analysis and use data up to 2016 when evaluating annual movie-release trends.

Average Budget and Revenue by Year

The chart compares the average production budget and average revenue of movies released each year. Both metrics show a general upward trend over time, with average revenue remaining higher than average budget in most years. The gap becomes more noticeable from around the 1980s onwards. However, the large fluctuations in earlier years may be caused by small sample sizes, missing financial data, or a small number of high-revenue movies.

Total Profit by Year

- The graph shows the average movie budgets and revenues generally increased over time, with average revenue exceeding average budget in most years. Total estimated gross profit also rose significantly, particularly after the 1980s.
- The growth in total estimated profit began to level off between 2016 and 2017.
